

## Remote, Off-Grid Power Solutions For Your Leak Detection Equipment

Does your pipeline integrity management program meet the NEB requirements for preventative control methods to mitigate the risk of leaks?

Do you have a reliable power source for your leak detection and valve control equipment when grid power is not available?

Gentherm Global Power Technologies (GPT) offers a variety of reliable low power solutions that compliment a number of different leak detection equipment brands. A GPT Thermoelectric (TEG) Hybrid solution is the perfect fit for companies that are looking for a green energy solution that will provide uninterrupted, continuous power during all seasons.

### GPT Hybrid Solution Advantages:

- > 99+% reliable solution as compared to stand alone solar
- > TEG back up requires natural gas or commercially available propane (ask GPT about cold temperature propane storage recommendations)
- > Customized solutions for site optimization
- > Long term system life and proven performance

See [GPT Hybrid Advantages](#) for more information
